A. Chain tis a dimer of identical chains, each of which is activated by cleavage A chain, while fragment gamma remains disulfide-bonded to the B chain to form Clr II. C. Comment: This protein is a serine protease that combines with Clq and Cls to form C. C. Genetics:
                                                                                                                                                                                                      A; Molecule type: protein

AND FLOOR PLATE REGION OF THE NEURAL 100B. LESS IN ESTINE, DERMIS OF SKIN AND THE BENDCHONDRAL BONE, SUBMICOSA OF INTESTINE, DERMIS OF SKIN AND THE MESENCHYME OF SPLEEN AND LUNG.
SIMILARITY: CONTAINS 2 EGF-LIKE DOMAINS.
SIMILARITY: CONTAINS 5 CUB DOMAINS.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12A (ZINC METALLOPROTERSE); ALSO KNOWN AS THE ASTACIN SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               EGF-LIKE 1, CALCIUM-BINDING (POTENTIAL).

Gluzman-Poltoriak Z., Cohen T., Herzog Y., Neufeld G.;
Neuropilin-2 and neuropilin-1 are receptors for the 165-amino acid
form of vascular endothelial growth factor (VEGF) and of placenta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NRP2_HUMAN STANDARD; PRT; 931 AA.

the 145-amino acid form of VEGF.";
J. Biol. Chem. 275:18040-18045(2000).
-!- FUNCTION: HIGH AFFINITY RECEPTOR FOR SEMAPHORINS 3C, 3F, VEGF-165
                                                                                              AND VEGF-145 ISOFORMS OF VEGF, AND THE PLGF-2 ISOFORM OF PGF.

-!- SUBUNT: NEUROPILIN-2 PROBABLY FORMS AN HYTEROMERIC COMPLEX WITH

NEUROPILIN-1 IN ORDER TO BE A FUNCTIONAL SEMAPHORIN 3C RECEPTOR.

-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROPIEIN.

-!- ALTERNATIVE PRODUCTS: 3 ISOFORMS, A22 (SHOWN HERE), A0 AND A17;

ARE PRODUCED BY ALTERNATIVE SPLICING.

-!- SIMILARITY: CORTAINS 2 CUB DOMAINS.

-!- SIMILARITY: CONTAINS 2 E5/8 TYPE C DOMAINS.

-!- SIMILARITY: CONTAINS 1 MAM DOMAIN.

AND VEGF-145 ISOFORMS OF VEGF, AND THE PLGF-2 ISOFORM OF PGF.
-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-!- TISSUE SPECIFICITY: FOUND IN CERTAIN NEURONAL POPULATIONS OF THE CNS AND IN OTHER NONNEURONAL TISSUES INCLUDING MESENCHYMAL TISSUE LINING IN THE RIBS.

REPORTION: RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE

TREDITAR SYSTEM. IN MAGIOGERESIS, IN THE FORMATION OF

CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS

SYSTEM. IT MEDIATES THE CHEMOREPUSANT ACTIVITY OF SEMAHORINS. IT

BINDS TO SEMAPHORIN 3A, THE PIGF-2 ISOFRM OF PGF, THE VEGF-165

ISOFORM OF VEGF AND VEGF-B. COEXPRESSION WITH KDR RESULTS IN

INCREASED VEGF-INDUCED ANGIOGENESIS (BY SIMILARITY).

IT MAY REGULATE VEGF-INDUCED ANGIOGENESIS (BY SIMILARITY).

IT SSUE SPECIFICITY: NERVOUS SYSTEM.

IT SSUE SPECIFICITY: NERVOUS SYSTEM.

IT SIMILARITY: CONTAINS 2 CUB DOMAINS.

IS IMILARITY: CONTAINS 2 F5/8 TYPE C DOMAINS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -i- FUNCTION: REQUIRED FOR NORMAL DORSAL DEVELOPMENT. TLD MAY INTERACT PRYSICALLY WITH DAP-C PROTEIN.
-i- MISCELLANEOUS: MUTATIONS IN TLD GENE LEAD TO A PARTIAL TRANSPORMATION OF DORSAL ECTODERM INTO VENTRAL ECTODERM.
-i- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12A (ZINC METALLOPROTEASE); ALSO KNOWN AS THE ASTRACIN SUBFAMILY.
-i- SIMILARITY: CONTAINS 5 CUB DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PRINTS; PRO0480; ASTACIN.

A novel gene derived from developing spinal cords, SCDGF, is a notique member of the PDGF/VEGF family(1)

FEBS Lett. 475 (2), 97-102 (2000)

E 20317014

E 2 (bases 1 to 1817)

I Submitted (25-007-1999) to the DDBJ/EMBL/GenBank databases.

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTE: This is a 'working draft' sequence. It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Insert size: 194000; agarose-fp
